Non-metallized, Dyed Film
Technology Offers an Attractive
Look at a Great Price

3M™ FX ST Automotive Window Films

The 3M Difference

Improving comfort, protecting vehicle interiors and the people who occupy them is a hallmark of 3M Automotive Window films. 3M invented window films in 1966 and our innovative window film products have provided protection from the sun's harmful rays for more than 40 years. Put the innovation of 3M to work for you.

There are thousands of window film dealers in the country, but only a select few have been chosen to be part of the 3M network. Our 3M Authorized Dealers are available to help solve problems such as excessive heat and glare in your vehicle.

Stay Cool

3M's FX ST Automotive Film provides protection from the sun's heat and ultraviolet rays. FX ST rejects up to 45% of the total solar energy coming through your windows, providing a 'cool effect' in more ways than one.

Stay Connected

3M FX ST Automotive Window Films are non-metallized. The result is an easy-to-maintain, long-life film that won't interfere with mobile phone, GPS and satellite radio reception. This eliminates the frustration of lost connectivity associated with metallic or hybrid window films.

Superior UV Protection

Blocking 99 percent of UV light, 3M FX ST Automotive Window Films provide a total Sun Protection Factor (SPF) of up to 1000. This provides vehicle occupants with significant protection from the dangers of the sun's UV rays, including sunburn, causes of premature aging, and the risk of more serious skin conditions.

Reduces Glare

3M FX ST Automotive Window Films significantly reduce glare from blinding sunlight, allowing you to see better and concentrate more on driving. FX ST films are available in a variety of tint levels to meet your needs, allowing 5% to 50% of the visible light into your vehicle.

Limited Three-Year Warranty

3M FX ST Automotive Window Films are backed by a three-year warranty should your window film need replacing from bubbling, peeling or blistering. 3M Automotive Window Films are durable and virtually maintenance free. Our films are sold and installed exclusively by professional, Authorized 3M Dealers.

TSER (Total Solar Energy Rejected)

3M Automotive Window Films

Another Great 3M Product You Can Trust

visible light transmitted

The percentage of visible light that passes directly through filmed glass: the higher the number, the lighter the film.

total solar energy rejected

The percentage of total solar energy rejected by filmed glass. The higher this value, the less solar heat energy is transmitted by the glass.

visible light reflection

The percentage of visible light reflected back from the glass.

uv rejection

The percentage of ultraviolet light that is rejected by filmed glass. Ultraviolet light contributes sunburn and other harmful skin conditions from the sun and to the fading and deterioration of fabrics and leather.

glare reduction

The percentage by which visible light is reduced by the addition of film.

* Performance data generated using applicable industry test methods and standards.

Put the innovation of 3M to work for you

3M invented window films and no one has more experience. In 1966, we received the first patent for window films. Today there are millions of square feet of 3M Window Films installed all around the world. Put your trust in 3M Window Films, a name you know for quality products and services. We never stop creating new window film products and solutions that make your car more comfortable.
